Smart connected digital permits

ePermits

Smart connected digital permits

Orikan's ePermits permit issuing technology replaces paper permits for parking and other services.

Permits and bay reservations can be challenging to manage because of their complex and granular regulations. Our fully-automated and customisable solution has been developed to meet that challenge and serve communities by alleviating financial and administrative burden.

Rising population density levies unique demands upon our communities. Our innovative solution provides greater flexibility, and, when used for parking, increases equity and efficiency. The ePermits solution integrates with your website, where applicants can easily and quickly apply for permits online with any web enabled device.

ePermits is fully integrated with the PinForce product suite and PayStay digital payment and way-finding application. Permit details are accessible via API to PinForce, which prevents infringements from being incorrectly issued to valid permit holders.

FEATURES & BENEFITS FOR CLIENTS

- Automate applications for permits from eligibility to approval
- Curtail administrative burden and reduce delays in permit processing
- Get accurate permit validation via integration with PinForce enforcement suite
- Manage any parking permit type: Residential & ACROD, parking, special events, visitors, bus parking and more
- Preserve access across the community: accommodate no tech, low tech and high-tech users
- Operate ePermits with your internal staff or outsource the full permit operation
- Detailed and accurate analytics on permits issued

FEATURES & BENEFITS FOR END USERS

- Greater flexibility to apply, renew and manage their permits—no need to be available during work hours, call up, or attend an office
- Quick, easy digital applications
- Fast, simple online updating of permit details such as a new registration number
- Easily apply for visitors' permits via PayStay app
- Protect against permit misuse for more equitable access
