

PayStay

Makes life easier
for everyone

PayStay

Makes life easier for everyone

PayStay is a leading pay-by-phone application, and its success can be attributed to its ease of use.

FOR THE COMMUNITY

Finding parking in any town or city can be difficult. Finding a space that suits your time restrictions, price and location requirements can sometimes seem impossible.

PayStay's real-time parking locator feature is the first of its kind for on-street parking in Australia. It allows people to explore the mapped area in which they intend to park their vehicle. With a tap of their finger they can select their desired space to reveal all parking information including price, duration and, if sensor data is available, likelihood of vacancy.

PayStay benefits the community:

- Allows users to sign up with their email addresses or their Google or Apple accounts for streamlined onboarding
- Allows users to search for car spaces near their destination
- Gives real-time parking availability when connected to sensor technology
- Guides users to the locations with available car parking
- Informs users of tariffs and parking restrictions
- Allows users to start and stop parking to ensure users only pay for the time they use
- Auto-loads nearby parking zones so users don't have to worry about manual errors when typing in long zone numbers
- Provides users the option of parking session expiry and driving reminder services
- Provides contact-free digital payments through credit card, Apple Pay or Google Pay
- Streamlines residential ePermits applications and payments integration
- Available to download via the App Store or Google Play
- Integrates with Apple CarPlay and Android Auto
- Prebook in selected off-street car parks

FOR COUNCIL

- Orikan's experience and commitment to continual development empowers us to future-proof our PayStay technology
- The PayStay and PinForce Mobile system provides parking rangers with targeted information that allows them to quickly identify high-risk areas and manage violations
- Choose an established, proven solution with a large user base
- Reduce your costs, improve streetscapes, and manage the rationalisation of existing parking meters
- Seamless integration with PinForce enforcement suite, ePermits and Sentinel sensors, as well as a variety of parking meters and off-street parking management tools
- Developed, supported and hosted in Australia
- PCI-DSS accredited
