

PinForce LPR Remote

Gateless Parking

PinForce LPR Remote Gateless Parking

PinForce LPR Remote is the gateless parking solution from Orikan. It allows you to eliminate the cost and inconvenience of physical barriers and tickets or access passes.

Historically, off-street parking operators have used physical barriers to manage access to facilities, prompting motorists to pause at a gate and receive or validate a ticket or scan an access pass. But these physical barriers cause long queues of vehicles and obstruct the flow of traffic within the facility, and they can be costly to install, maintain and repair and often require operators to source purpose-made components.

PinForce LPR Remote is a convenient, cost-effective, gateless solution to access control. Using simple, easily-sourced cameras at entry and exit points and Licence Plate Recognition (LPR) technology to record number plates and identify vehicles, it permits operators to track and manage entry into and egress out of parking facilities. The integrated central management system receives real-time parking information, which provides ample data to deliver insights into how the facility is used in intuitive dashboards and reports.

PinForce LPR Remote doesn't just eliminate the unnecessary capital expenditure associated with physical barriers and preserve the flow of traffic within facilities, it also creates a better parking experience for the community. There's no more scanning badges, no more keeping track of tickets, and no more queuing at the gate.

FEATURES

- Common, easily-sourced hardware components reduce capital expenditure and improve time to deployment
- Offers seamless integration with the whole Orikan ecosystem, from wayfinding to compliance
- Secure, web-based central management system requires no installation and delivers comprehensive reports and dashboards to support enforcement and business intelligence
- Real time data supports more streamlined and effective enforcement
- PinForce LPR Remote is scalable and cost-effective for facilities at any size

BENEFITS

- Eliminate queuing and congestion at points of ingress and egress
- Avert up-front investment and ongoing maintenance and repair associated with physical barriers
- Do away with physical tickets and passes by using licence plates as vehicle identifiers to support enforcement and compliance activities instead
- Enhance security by ensuring all occupants and parking sessions are appropriately tracked and logged in the central management system
- Deliver a seamless and convenient parking experience for motorists
- Capture extensive occupancy and use data to analyse in real time and access it from any location
