UbiPark Agile

Digital parking management

UbiPark Agile is a parking management solution from Orikan that empowers asset owners to extract greater value from their existing parking assets by optimising the use of space and reducing administrative burden.

Using an account-based system, parking managers set rules that encompass and automate every element of parking management, from facility access to payments to data collection.

Every detail of an UbiPark Agile deployment is managed securely from the administration console, which ensures that parking managers retain control of multiple locations and manage resources all in one convenient, central system.

UbiPark Agile offers three modules:

SUBSCRIPTIONS

Using the subscriptions module, parking managers define parking rules and assign spaces for subscriber parking, and motorists pay an ongoing subscription for regular access. It features options for easy online applications as well as custom pricing, invoices, renewal periods and credentials capture.

CORPORATE PARKING

This module allows parking managers to onboard companies as administrators.Each company then manages its own end users. Customisation options are available for visitors and contractors, and rules for companies can be individualised, so parking resources are distributed optimally.

FAST TRACK

Designed to eliminate unnecessary delays and provide a seamless parking experience, this module prioritises ease of use and efficient traffic flow. Parking managers control the parking rules across user groups and access types. Motorists pay for exactly the parking they use.

FEATURES

- Real time data and dynamic pricing options empower parking managers to price parking according to demand, optimise the use of space and realise stronger returns during busier periods
- Enjoys integration with a wide range of PARCS and finance systems
- Self-service system transfers administration from parking management to end users, reducing administrative overheads and streamlining service delivery
- Custom reports and personalised dashboards deliver high quality business intelligence
- Supports remote access through LPR, bluetooth, smartphone applications or QR codes

BENEFITS

- Leveraging automation to lift operational efficiency boosts ROI of parking assets for property owners
- Drives dynamic engagement with users, including options for subscription models, premium offers and dynamic pricing, improving convenience and lifting revenue
- Automated processes reduce the need for administrative resources
- Works with existing access solutions, so there is no need for expensive replacement equipment
- Account-based system ensures parking sessions are appropriately assigned to a user, enhancing security and improving compliance
- Easy implementation supports rapid time to deployment across multiple sites and tenants
- User-linked data capture ensures high-accuracy usage information is available for analysis, improving the quality of business intelligence to inform resource optimisation and targeted marketing
